Our Impact: CSELS programs advance public health

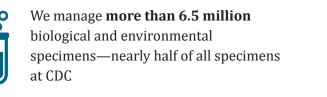

Approximately 100 notifiable disease and conditions are tracked continuously using NNDSS

Nearly half of U.S. emergency department visits are reported to

MMWR's electronic media reach totals more than 23 million

Every day, **more than 100** learners join CDC TRAIN

We were the **first to publish** quality guidelines for next generation sequencing—modern methods of sequencing DNA

The Stephen B. Thacker CDC Library houses more than **120,000** unique items n its catalog

Division of Health Informatics and Surveillance

Director Paula W. Yoon, ScD, MPH

Division of **Laboratory Systems**

Director Reynolds (Ren) M. Salerno,

Division of Public Health Information Dissemination

Director Sonja A. Rasmussen, MD, MS

Division of Scientific Education and **Professional Development**

> Director Patricia M. Simone, MD

The Road Ahead: Today's challenges, tomorrow's innovations

In recent years, Ebola and Zika virus outbreaks were the top health stories. CSELS mobilized coordinated response efforts to these emerging health threats through our **Program Integration Unit**, with EIS deploying officers to affected areas in the United States and around the world. *MMWR*—"the voice of CDC"—published regular reports making tools.

Modernization Initiative aims to strengthen the system's quality data on diseases and other health threats than ever before. In 2016, we assumed responsibility for another key

and prevention guidelines for the public health community, while our **health information technology** and **Meaningful** Use experts helped devise data sharing and clinical decision

Critical infrastructure upgrades are under way for a pillar of our public health system, NNDSS. Led by CSELS as part of CDC's agency-wide Surveillance Strategy, the **NNDSS** ability to provide more comprehensive, timely, and higher part of the Surveillance Strategy: the SDP With Shared **Services**. This platform will enhance data collection, management, analysis, and dissemination with minimal burden on CDC partners.

CSELS is making critical investments in the public health workforce of today and of the future—for both short-term urgent needs and long-term capacity-building. As part of CDC's laboratory safety initiative, we established the **Laboratory Leadership Service.** This new fellowship program develops early-career laboratory scientists for future leadership and management positions. To address other aspects of the changing healthcare landscape, our Population Health Workforce Initiative (PHWI) is building a competent corps of professionals to bridge the gap between individual care and population health. PHWI and fellowships that support it—like the **Population Health Training in Place Program, Health Systems** Integration Program, and Preventive Medicine **Residency and Fellowship**—bring health departments and health systems closer together to improve coordinated care.

CSELS Fast Facts

Our Services. Our Work. Our Impact.

AT A GLANCE

Established in October 2013

Unites more than **30** programs across **4** divisions

Composed of approximately **700** staff and contractors

Supports training for more than

threats.

the nation's public health system.

safe, healthy, and informed.

The Center for Surveillance, Epidemiology, and

Laboratory Services (CSELS) is a collection of programs

and activities that together form the backbone of much of

and tools to support CDC's efforts to promote health,

prevent disease, and prepare for emerging health

■ We make sure that scientists, researchers, healthcare

providers, policymakers, and decision makers have the

threats, take advantage of improving technologies, and

systems, standards, and training they need to keep us

■ We strive to be ready to respond to tomorrow's health

be at the forefront in providing the most up-to-date

scientific services to advance public health.

■ We provide the scientific service, expertise, skills,

Our Mission: To provide scientific services to advance public health

Our Work

- Our cross-cutting programs bring CDC's scientific support services together under one roof to
- ✓ Develop and maintain health information and disease-tracking systems
- ✓ Improve the quality of laboratory testing and practices
- ✓ Disseminate evidence-based information to improve public health science and decision making
- ✓ Build a competent, sustainable, and empowered public health workforce.
- Our work supports programs and initiatives across CDC and throughout the federal government.
- We also provide extramural funding to support state and local health departments, medical and professional associations, healthcare groups, and other public health partners.

of Health Professional Development Division of Systems (DLS) **Public Health** Information

Center for Surveillance, Epidemiology, and Laboratory Services

Our Programs

- CSELS programs are organized in a way that allows them to work towards both shared goals and individual objectives. This strengthens CDC's ability to serve its partners and stakeholders—within CDC and across the broader public health community.
- Some of our programs have a long and robust history as flagship components of CDC. Our oldest program, the **Epidemic Intelligence Service (EIS)**, was established in 1951 as CDC's "boots on the ground" during public health emergencies.
- Other programs reflect the changing landscape of science and medicine. Our newest program, Surveillance Data Platform (SDP) With Shared **Services**, was launched in 2016 as a virtual platform that uses the latest technologies to optimize public health surveillance.

A Few Examples

- The Morbidity and Mortality Weekly Report (MMWR) has been CDC's primary scientific publication for more than 50 years, reporting first on public health problems such as Legionnaires' disease and HIV/AIDS.
- Our biorepository services manage and preserve CDC's millions of biological and environmental specimens, as well as samples that support genetic testing.
- The National Notifiable Diseases Surveillance System (NNDSS) allows public health partners to share information to monitor, control, and prevent diseases and other health threats.
- The CDC Learning Connection links public health professionals around the world with free, quality, accredited training resources from CDC, partners, and other organizations.

Our Priorities: CSELS activities are organized around four strategic goals

We lead a national surveillance strategy for human health, which builds on current resources, establishes priorities for next-generation technologies, and provides timely, comprehensive, and accessible information to protect the public's health. We also develop standards for health informatics and strengthen the quality and safety of laboratory practices. Activities include

- Modernizing the NNDSS and enhancing the National Syndromic Surveillance
- Evolving **Epi-Info**[™], a flexible, scalable, free suite of software tools for public health practitioners and researchers worldwide
- Implementing the Clinical Laboratory Improvement Amendments (CLIA), which govern all healthcare-related laboratory testing performed on people in the United States
- Translating **genome-based discoveries** into practices to improve health.

We build partnerships that touch all aspects of health. We create linkages among a range of partners and stakeholders—across CDC and other federal agencies, and in the scientific, health care, and public health communities. We're a place where many perspectives intersect and where experts across disciplines can come to consensus to benefit the public's health and safety. Key partners include

- Council of State and Territorial Epidemiologists
- Association of Public Health Laboratories
- Association of State and Territorial Health Officials
- National Association of County and City Health Officials
- Other federal agencies such as the Centers for Medicare & Medicaid Services and FDA.

MMWR

We lead national efforts in scientific education and professional development to ensure that researchers, technicians, healthcare providers, and communicators are ready to take our health system forward. We ensure that the people who keep the public healthy and safe have the guidance, products, and services to do their jobs better through

- **Fellowships** across a range of scientific and public health disciplines, for multiple educational levels and career stages
- Quality training opportunities and resources through platforms like the CDC Learning Connection and CDC TRAIN
- Timely evidence-based information published by *MMWR* and *CDC Vital Signs*™
- A growing inventory of print, web-based, and digital resources designed to support laboratory capacity and competencies.

We maximize the center's impact by recruiting and retaining dynamic leaders and expert staff. CSELS effectively manages how the center operates to improve internal performance through exemplary business service, innovative practice, and continuous workforce development. Activities include

- Supporting CSELS scientists and ensuring all research and data dissemination adheres to federal regulations and policies
- Setting standards and processes for **high-quality communication products** that promote the center's efforts
- Organizing CSELS programs around shared policy priorities and strategies
- Managing the CSELS budget effectively, including our external funding portfolio that supports public health systems, work force, and partners.

Where We've Been: The history of CSELS is the history of CDC
